

## Welcome to a whole new dimension of FDM4 Warehouse Management

### Exciting News:

The TC8000 has revolutionized RF scanners by replacing old conventional RF scanners and keyboards with touch screen technology. FDM4 is aligning itself with the TC8000 and is just around the corner from launching device specific software.

Can't wait? Call our sales team today to discuss temporary solutions. Don't get stuck with obsolete hardware, that can't run the latest software.

Purchase the TC8000 directly from FDM4 to receive a significant price advantage on the all new device specific software.

### What Makes the TC8000 so Special?

- Increase productivity and gain an extra hour a day, per worker by saving 14%.
- Offers an ergonomic design with a perfectly balanced center of gravity.
- Repositioned touchscreen eliminates the need to tilt and verify after each scan.
- Equipped with the largest battery in its class.
- All this, while built to endure a rugged work environment.

THE NEXT **BIG** THING IN WAREHOUSE MOBILITY

## Employee Spotlight

This month's Employee Spotlight is on **Our Customer Support Teams.**

This month it was difficult to narrow down just one person who was deserving of the spotlight, so for November we are celebrating all of our dedicated customer support teams. It has been a busy month, with many long hours and on-site visits, which our teams took in stride. They delivered unwavering excellence and for that, our company thanks them.

## Press Room

### Customers in the News

We would like to extend a sincere congratulations to Alstyle Apparel on their successful launch of the FDM4 solution suite.

### Technical Corner

**Decoration Module** FDM4 is currently working towards the launch of our first phase of Web Decoration modifications based on user group direction. The goal of the launch is to; enhance decoration entry, better the design flow to control warehouse assignment, add additional options for users, improve overall work flow, and allow for personalization by users.

**Browser based WMS** We are also excited to announce the initial prototype of the new browser based WMS application for use on a touch screen RF scanner. In our initiative to align ourselves with the TC8000 we are developing device specific software to work in sync with this cutting edge product. With our new WMS system, alongside the TC8000 you will be able to add more than an additional hour of productivity, per day.

### FDM4 is Growing

We are in the process of expanding, which means hiring new staff for both our Canadian and Las Vegas offices. Our Canadian office will be adding additional work space to accommodate our new employees. We look forward to growing to better serve our client base.
